Needs just a
12' footprint

4.5 feet

A "CRACK CLIMBING REVOLUTION" in Your Gym

- Add 4 New Ropes in only a few feet of floor space.
- Raise excitement. Challenge members with new crack climbing skills.
- Put your gym on the cutting edge. Grow your profits!
- Quick installation. No on-site construction. Bolts together. No permits.

SPECIFICATIONS:

- Freestanding up to 36' high in 4' sections.
- Modular steel frame. Bolts together. No on-site construction. No permits required.
- Bolts to floor on approved mounts.
- Hand-carved, true-to-nature cracks.
- Switch able panels (with t-nuts) create climb difficulty ranges from 5.7 - 5.12. Unlimited routes are possible. Additional panels are available.
- Realistic rock surfaces and colouring to match your gym.
- Tower sits on 4.5' x 4.5' floor footprint. Minimum 6' clearance on all sides.
- Your route setters can re-arrange tower panels anytime using normal wrenches. (We train you as part of the installation.)

INSTALLATION TIME LINE:

Your tower installation will be complete in approximately six weeks following signing of a purchase contract. On-site installation by our Crack Systems team takes 2-3 days. While awaiting installation, your local contractor makes any necessary floor preparations.

Add shipping days to your gym from San Diego, CA.

COSTS:

Cost is less than typical gym wall construction and dramatically less than a typical permanent climbing crack. Your cost is a combination of 4 elements:

- 1. Tower height:** Each 4 foot high, four-sided module costs \$4,260. Divide your tower height by 4 and multiply by number of modules.
- 2. Foundation preparation:** Floor footings and mounts required depend upon tower height. Each 4 foot high, four-sided module weighs approximately 950 pounds.
- 3. Freight to site:** Trucking cost is based on weight and distance.
- 4. Installation cost:** Travel from San Diego and per diem for a two person installation team, plus one scissors lift rental.

ABOUT US:

This first-ever changeable crack climbing tower is the imaginative brain-child of Jon Lewis, a long-time climbing enthusiast, serial inventor, and experienced builder of indoor rock climbing gyms (former Solid Rock Wall Systems team member). Other climbing innovations are in the works. Crack Systems is a division of Smart Families, Inc.

FAQs:

Q. Where can I see and experience a Crack Systems climbing tower?

- A.** Two Solid Rock gyms in the San Diego area have installed towers.

Q. How tough are the tower cracks to climb?

- A.** Crack widths (fingers, hands, fists) and characteristics vary on each of the

four sides of the tower, offering easier to very difficult climbs. New routes and challenges are always instantly available simply by re-arranging the sequence of panels and the addition of t-nut holds.

Q. What is your quality guarantee?

- A.** Tower steel cracks panel modules carry a five-year replacement guarantee, under normal use conditions. Construction is fully certified.

Q. How can I get a price quote?

- A.** Contact us to discuss your setting, tower specifications and schedule. We'll calculate the costs and provide all installation details. A signed contract with 50% deposit starts the clock. The balance due is payable upon shipment to location. We accept credit cards.
